

## Installing and Configuring Cisco AnyConnect VPN Client

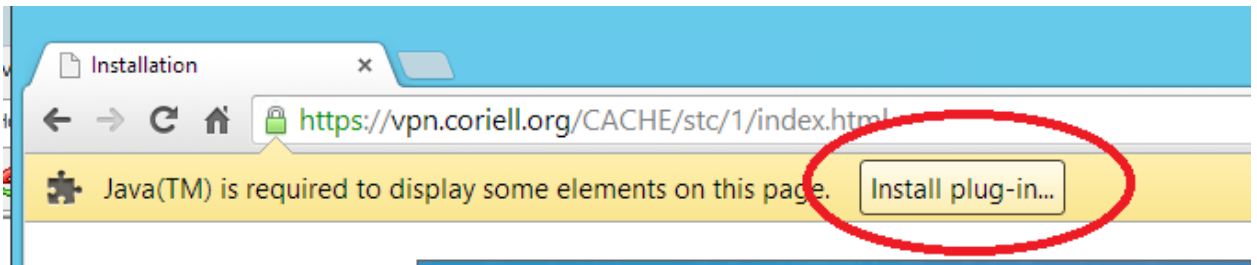

Below are the complete instructions for installing the Cisco AnyConnect Secure Mobility Client and using it to connect to the Coriell Institute for Medical Research internal network. If you have previously installed the client, proceed directly to Step 5.

**Please note these instructions will not work in the Coriell office and must be performed at home.**

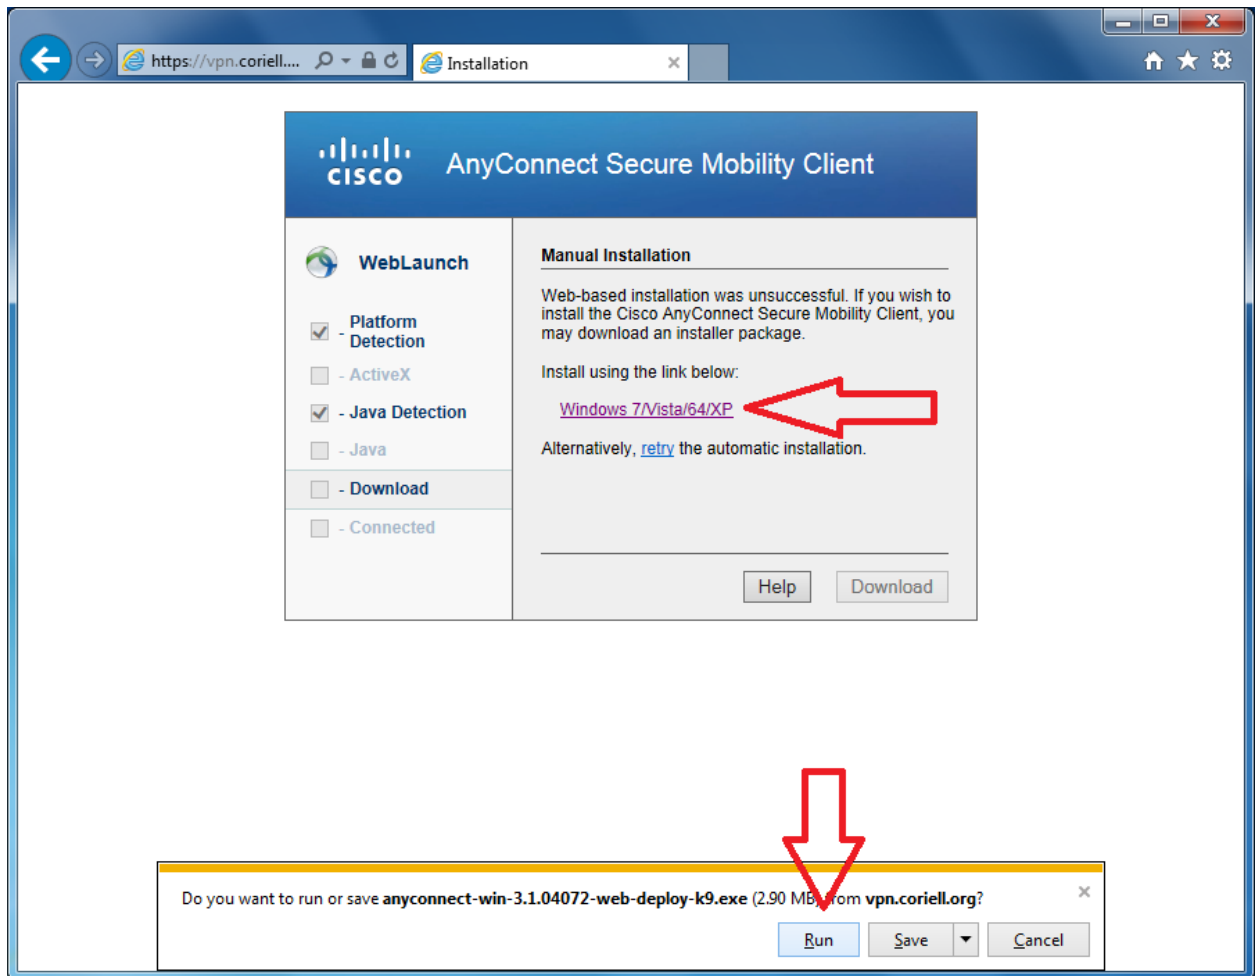

- 1) Launch your web browser and point it to **http://vpn.corieell.org**. At the login screen, enter your username and password. This will be the same password you use to log in to Windows on your computer. The Profile on this page should be set to **Default**.

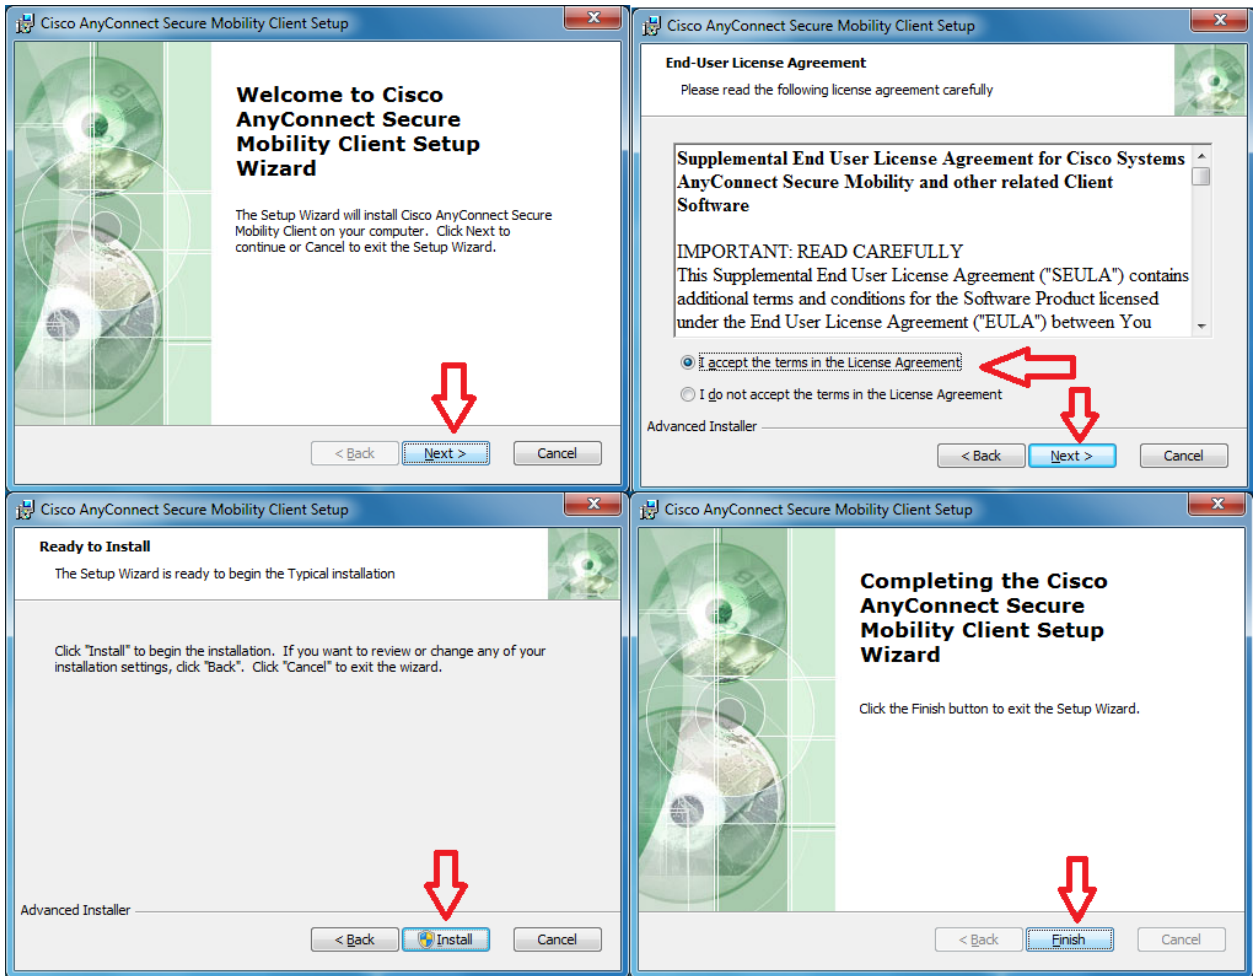

- 2) After you hit Connect, the Java applet will launch. You may be prompted to Run or Install Java to proceed.

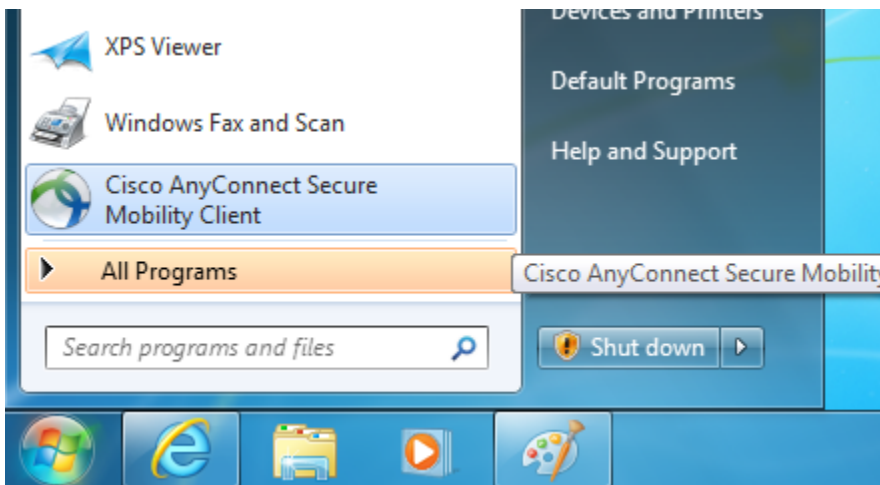

- 3) The applet will detect your computer's operating system and you will be presented with the proper download link. Click the link, and then run the application when prompted.

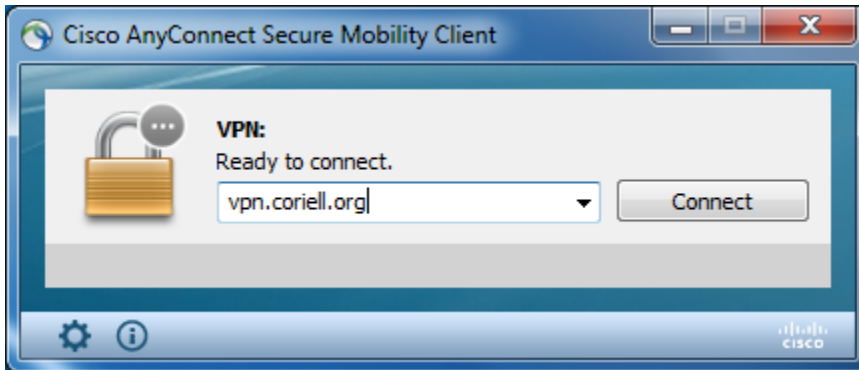

4) The installer will now begin. Follow the prompts as shown below to complete installation.

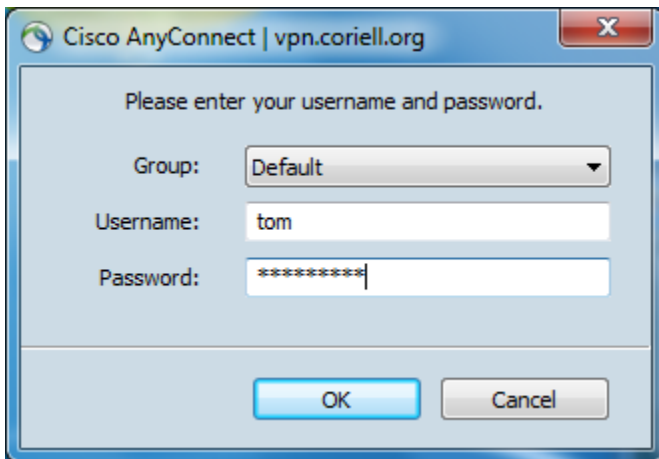

5) Once the software is installed, you may launch the Cisco AnyConnect Secure Mobility Client from the Windows Start Menu.

- 6) Enter **vpn.corieell.org** in the box and click the **Connect** button.

- 7) When prompted, enter your username and password. Note that this is the same username and password used in Step 1. The Group should be **Default**. Hit **OK** to connect.

- 8) You are now successfully connected to Corieell.
